Changes to CAC Board of Directors

The Cement Association of Canada (CAC) is pleased to announce the appointment of Mr. Jim Brown, President and Chief Operating Officer of Lehigh Northwest Cement Limited, as Chairman of its Board of Directors, effective March 19, 2007. He succeeds Mr. Alan Kreisberg, who stepped down after serving as Chairman for two years, and will remain on the Board as a member representative.

Jim Brown is President and Chief Operating Officer of Lehigh Northwest Cement Limited, the British Columbia-based subsidiary of Lehigh Cement Company, since January 2004. In addition, he has overall responsibility for the Lehigh Pacific Region on the west coast of North America. Lehigh is the North American arm of Heidelberg Cement, a leading global cement company. Jim Brown started his career in the cement industry in 1976 with Inland Cement, also now a Lehigh company. During the course of his career, he has held positions of increasing responsibility in western Canada, California and Pennsylvania. Jim has a Bachelor of Science in Chemistry from the University of Saskatchewan - Regina.

Pierre Boucher, President and CEO of the Cement Association of Canada, stated, "We welcome Mr. Brown as Chairman and are sure that he will be a worthy successor to Mr. Kreisberg. We owe a debt of gratitude to Mr. Kreisberg for his service as Chairman during the last two years."

The Cement Association of Canada represents 100% of the Canadian cement producers and is the national and regional voice of Canada's cement industry. Its members include nine companies with clinker and cement manufacturing facilities, granulators, grinding facilities and cement terminals from coast to coast. Together with concrete producers, the industry contributed over \$6.6 billion to the economy in 2006 and accounted for more than 26,000 Canadian jobs. The CAC's mandate is to increase and expand appropriate use of cement and concrete in Canada. Through partnerships in marketing, public affairs, engineering, education and technical support, the Cement Association of Canada seeks to advance the contributions that cement and concrete make to vibrant communities, a healthy/sustainable environment and a competitive economy.
