Stel-Marr Concrete Acquires Biggest Concrete Mixer Truck in the Inland Region

"But it's impossible to find a parking space!" This 62-foot Triple Tractor Trailer, a new addition to Stel-Marr's concrete mixer fleet, improves efficiency by hauling larger loads of concrete.

In early January, Stel-Marr Concrete of Edmonton, Alberta took delivery of a brand new Triple Tractor Trailer that is capable of hauling 14 metres of concrete. The new truck has a length of 62 feet, while the other trailer units in the fleet are generally around 51 feet in length.

"Personally, I haven't seen a Triple Tractor Trailer unit in Alberta, and I know that this is the first one added to Inland's mixer fleet," said Ken Bowers, Manager, Stel-Marr Concrete Ltd. The addition of the large truck will improve efficiency as a smaller fleet and fewer drivers will be able to deliver increased capacity.

The new truck was prepped to meet Alberta's operating and safety standards, and hit the road in February with driver Larry Menzel at the controls.
